

Stormwater Management Case Study

**StormTech System
Al Muntazah Street Extension
Doha, Qatar**

Client:	ASHGHAL
Consultant	Parsons
Contractor	Al Jaber Transport and Gen. Contg.
Application	Infiltration
Quantity	20,274 m ³

Al Muntazah Street Extension project (P012) includes approximately 8 km of new dual carriageway on Abu Hamour Road from East Industrial Interchange to Woqod Interchange, and approximately 2 km of dual carriageway on F-Ring road from Woqod Interchange to Al Jazeera Interchange.

StormTech was used as infiltration tanks with an overflow to the Muntazah Street tunnel as necessary. The tanks would therefore operate in the interim and the long term primarily as an infiltration system.
